Abstract

Review Article

Introduction: For 30 years, already, in Serbia it is written to competent ones in Health Ministry, health institutions directors and appropriate faculties deans, asking them to react concerning mortality caused by cardiovascular diseases (CVD), cancer, diabetes and other diseases, but nobody does. Presented data about deaths from CVD and cancer, are compared with deaths from corona virus, having the same cause which is easy to eliminate from living space. All that is in the Earth magnetic field (EMF) gets magnetic properties (MP). Diamagnetic can become paramagnetic, depending on environment in which it is. Abnormal EMF increase by artificial magnetics (remanent and induced magnetization) and electromagnetics, because magnetic properties are additive and get EMF higher than natural, called anomalous magnetic fields (AMF). They are measured by protonic magnetometer "unimag II", American production. **Aim:** To prove that living world is assemblage of electrical beings. To point electrical potential in body generator. Point AMF enormous pathological power from environment and show how it affects the living environment. Show how an old organism functions and how a young one concerning immune system and old age. Explain why aging occurs and why old people get more easily diseased by almost all diseases. Show what EMF is in bioworld and what happens to a monozygotic twin brother who lived in cosmos for one year (what changes are noticed). Also, explain what is noticed after cosmonaut's return to Earth and compared with his twin brother on Earth. Official experts cannot explain how EMF changes life in cosmos and on Earth. Present experiment results in Psychiatric Clinics, where patients lived for 30 days in AMF and other 30 days in natural EMF, with laboratory results of both locations; they were 40 schizophrenic patients. The experts who followed results noticed nothing while processing the data. Clearly present a mother cell division into two baby cells, than make understand breathing. It is necessary to say how and why corona virus appears, how it functions and how to fight it easily. Show statistics of diseased by CVD, cancer, diabetes and corona virus. Give full picture of errors of official medical science about cancer causes (radioactive radiation and sunbathing), why are they, wrongly, called cancerogenous. Finally, explain why smoking and diabetes are considered risk factors for a great number of diseases, and official science could not clear it. **Methodology:** The used scientific works published in international journals are listed below in Literature, being this work's basic methodological lead. Unknown physiological and pathological processes with people are explained. From published works it is clear that AMF are lots of diseases cause. **Results:** Clearly presented are physiology, cells division, breathing, heart and central nervous system functioning unclear things, showing that humans are electrical beings and that chemical substances are electrical impulses products. School and faculty textbooks should be innovated based on the published scientific works, and in pathology, dominant diseases are CVD, cancer, diabetes, having one cause - AMF from environment. These results are compared with corona virus mortality - interesting to register, because from appropriate science there are no comments, and cause is AMF, easy to eliminate. Explanation about virus entering into host cells and its functioning with AMF increase. Suggested is how to stop mortality by removing AMF from patients' living spaces. Aging is explained and why old people easily get sick if they live in AMF, than when AMF is removed as disease cause and they live in natural EMF the expected life length is over 90 years, what, during these 30 years of work, has been proved, there are 15 persons who lived over 90 years after moving them away from AMF, and some are still alive and observed. **Conclusion:** Humans are magnetic and electromagnetic beings. All chemicals are electrical impulses products. Life is created according to magnetic code enabled by EMF and cosmic radiation (CR) and end of all beings will be when EMF disappears, as it happened on planet Venus. Biology-medical science should consider physical fields in order to prolong life on Earth and eliminate hard diseases (cancer, CVD, diabetes, autoimmune diseases etc.) caused by AMF, what is possible only by removing AMF from people's living spaces, what prolongs healthy life. Shown is that radioactivity and sunbathing are not malignant diseases causes and it is wrong to consider them as cancer causes. It is explained how diabetes and smoking help lots of diseases appearance, but only with AMF as a cause. Conclusion is given how and why younger people get CVD, cancer and, recently, informed through media, corona virus because living spaces are polluted by AMF from environment, because of too much use of phones - fixed

and mobile, earphones, computers, televisions, printers, home furniture is more than 90% with ferromagnetic and paramagnetic materials. Complete electrification of living spaces is a great generator of AMF and electromagnetic field as living spaces pollutant, but nobody pays attention to it and it is a real wonder that there are no more diseases and mortality. The reason is because people move around a lot, what makes body viscous magnetisation, appeared by AMF from environment, to dissipate, it is helpful in such a bad situation. Respected authorities should understand this with responsibility and start fighting AMF at work and living environments.

Keywords: EMF, electric beings, old age and young age, AMF, corona virus.

INTRODUCTION

It is high time that biology-medical science understands that in bioworld rule magnetic and electromagnetic forces and that the great importance of Earth magnetic field (EMF) must be considered, because: "Remember well, all in EMF magnetizes and that diamagnetic properties are relative, not absolute, meaning that they can be paramagnetics if basic environment magnetically changes, what frequently happens during metabolism. Then, two things must be understood: 1. Probably, you think that we are only physical matter, but not, we are magnetic and electrical beings. 2. Proteins, enzymes, hormones, neurotransmitters are only by-products of, always, present magnetic and electric impulses." Who understands always present covalent and coordinative chemical connection must understand that, exactly, these connections enable magnetic attraction of chemical elements nucleus (boron magnetons), and then, electromagnetic nucleus forces make electrons moving.

CNS functioning is generated due to cosmic radiation (soft component) of electrical potential in the form of action potential, moving through nervous tissues along entire body, enables all organs functioning and heart and brain functioning, too. Also, presented are mental diseases causes, being variable magnetic fields and AMF from environment [1, 3].

Earth physical fields are fundamental for appearance, duration and end of life on planet Earth. EMF are the most important, first, for life creation on Earth. Thus enabling a mother cell division into two baby cells, helped by Crossing Over in such way evolution of living world goes on Earth [6]. MP of breather [2] are fundamental and appeared due to EMF enabling human beings breathing.

It is clear that Earth magnetic fields (EMF) enable MP of each cell in organism. Magnetisation centers are in organelles and the strongest are in each cell's nucleus. Of all organism cells, the strongest magnetisation have neurons because they have a very thin cytoplasm, and most often, there is none, but only cells' nuclei. Proofs that nervous cells magnetic forces are the most important properties for central nervous system (CNS) functioning are in Literature 2, 3.

It is not excessive to show another two examples of cell's magnetic properties, as it follows: There are evergreen kinds of trees which, when replanted, must be marked with orientation concerning world poles from the place in which they were before, only then they can be replanted in another place, then they will not fade. Why? Because the tree cells are magnetised and metabolism is done helped by MP in direction N-S, and they cannot grow because metabolism is not done normally if they were not marked properly before replanting. It is known that, at first, Vikings used an ordinary tree floating on still water for orientation N-S when travelling, because it can show EMF direction, what is a clear proof that all cells are magnetised and oriented in EMF.

Central Nervous System (CNS)

CNS is electric potential (EP) generator, which, with MP and action potential, does everything in organism. EP appears due to cosmic radiation (soft component) by affecting, mostly, oxygen (O₂) because in CNS there are ten times more of it compared with other organs. Cerebral cortex with 6 layers has 40 times more O₂ than other body organs [3]. This composition and construction of cerebral cortex enables it to work as a condenser or accumulator, filled with potential during sleep time and emitted during awake, i.e. during its work time [1, 3]. Memorizing and remembering are clearly explained in Literature 1 and 3.

Each human being has unique anatomic brain properties, resulting from genetic factor and biogeographical environment with various Earth magnetic field intensities.

It is very important to explain how do potential differences between CNS regions and other body parts occur. Electric potential generator in brain is cosmic radiation (CR), enabled by different concentration of oxygen between brain regions and other body parts. It is known that brain uses ten times more oxygen for its functioning than other body parts. Cerebral cortex, functioning of which is very little known although it is the biggest part of nervous system, uses four times more oxygen than other brain regions. That is why in CNS, and especially in cerebral cortex, arise many electrons and ions produced by CR, with presence of oxygen great quantity (O₂, 40 times more than in other body parts). This gives high potentials in brain, so electrons

and ions flow toward lower potential. Through neuron nets tissues and synapses, micro-currents go towards autonomous organs (by autonomous nervous system), and by peripheral nervous system the entire body is supplied with current. This kind of electrons and ions movement is enabled by electric resistance, which is very high in skull and cerebrospinal fluid.

Brain Functioning

Brain is our body's manager. Manages and controls everything we do, both in awake state and in sleep. Brain manages all life important functions during organism's survival. For all human emotions there are many parts functioning together, and basic are: cerebrum, cerebellum, brainstem, hypophysis gland, hypothalamus, etc. CNS is the most complex organ in human body. Learning, memorizing, thoughts, conscience and intelligence are under brain's control. Simultaneously, it sends and receives multitude signals from all body parts and environment. Brain maintains conscience, making humans reasonable and moral beings.

CNS function consists of complex electric and magnetic actions. All these happenings in neurons and synapses have bioelectrical and biochemical basis, meaning perception, thoughts, emotions, learning and remembering [12].

All events are registered by senses' sensors, then relays of reticulum-thalamic system, finally, multi-layered cerebrum cortex. CNS cells are neurons arranged in CNS and with various dimensions, forms and MP. To get a clear picture of brain functioning, study Literature [1, 3] at the end of this work, the author can give these publications.

Inborn Instincts

In CNS are centers for all functions, also the inborn ones, such as: parental, food, survival, thirst and sexual. These neurons centers are codedly magnetised by EMF when created (formed) in uterus, already. Particular senses sensors (sensory stimulations) after birth produce micro-current impulses, which in neurons of particular centers create, by resonant electromagnetic fields, return micro-currents as CNS response to internal and external stimulations (what is exactly the same as with memorized informations automatically going back into our senses). These micro-currents stimulate motoric functions of some glands to discharge substances satisfying inborn organism's needs and muscles to react to stimulations from inborn instincts centers.

Important is the following: Already, before child's birth love for a certain work that this person will do in life can be developed, suggesting that persons can be formed with inborn talent for various professions,

but with a great work to perform it, only in this way the talents can be manifested.

Memory

Human memory is based on neurons communication by coded magnetic inductions it can be passed from one to another neuron (these are thoughts in brain). So, it can be concluded that signals in brain can be conveyed between neurons even if they do not touch each other, i.e., when between them there are no synapses to connect them. In other words, cells communicate through coded electromagnetic induced field. In these cases, neurons send coded signals, which are thoughts, to neighboring neurons, what is the same with radio and television. Telepathy is known as conveying thoughts to a distance. Brain sends a thought wave, which in fact is coded micro-electromagnetic wave of a particular frequency and wave length, this brain is transmitter or sender. Another brain is receiver, receiving these same coded electromagnetic waves and reproduces the coded thought. Broadcasting the information with a magnetic code, arranges in hippocampus neurons, where it is amplified becoming available for further use of many neurons connected with cortex. These are coded electromagnetic waves with characteristic frequencies and wave lengths, which other brain receives and reproduces. The reproduction is possible only if other person already has the information memorized according to M code, then, the sent coded electromagnetic wave induces resonance in receiving neurons and a stronger coded magnetic flux appears producing coded micro-current impulses, which in gigantic neurons (brain amplifiers - BA) gets amplified and it is thought information sent from one person and reproduced in another person's head, it is telepathy.

Doctors Diseased in AMF

By wrong learning, wrong interpretations and opinions may occur, manifested by paranoid behavior. An example of mind indoctrination are 5 psychiatrists in Psychiatric Clinics diseased, after working lots of years with psychiatric patients in anomalous magnetic field (AMF). They got the same illness as their patients. By strong magnetic induction, in diseased CNS AMF, they magnetised doctors' neurons, so they got the same disease.

Human Indoctrination of Belief in God

Another interesting example is mind indoctrination with religion. Esoteric interpretation of life appearance after death is a delusion because of ignorance and misunderstanding of organism functioning and life appearance on Earth. It is necessary to say that gods are invented by people in order to protect them on various locations on Earth, that is why various deities appeared and people's behavior because of lack of communications among them and various religious paranoid habits with religious delusions, they

also brought frequent religious conflicts and wars, what is obvious even today. Great example of paranoid behaviour are some religious convictions created by mind indoctrination from childhood in religious objects by religious teachers. We are witnesses that these convictions may be stronger than parental instinct which appears in brain regions for inborn instincts. It is clear how these convictions occur by repeating in minds about life creation and its lasting after death. Because of this, it is necessary to educate people by simple moral doctrines which can be done in religious objects, from childhood onwards. All mind abilities should direct in scientific way of life span extension and give very important suggestions of limiting procreation, because Earth cannot feed infinite number of people. It should be pointed that science has already extended human life duration, what in the future will be even more.

Cardiovascular diseases are the most frequent cause of illnesses and mortality, then come malignant causes, also, diseases as diabetes effects, considered by official science as devastating. About CVD and diabetes is said all that should be known [4, 9, 10]. It should be explained that malignant diseases causes are AMF and variable magnetic fields in life environment [7].

Mistakes about Cancer Cause Interpretation

Following is presenting official medical science errors concerning malignant diseases causes: how has wrong conclusions that radioactive radiation (depleted uranium) causes cancer appearance. So, all radioactive elements and substances are paramagnetics, meaning that, concentrated, they increase EMF intensities and create AMF, also, radioactive radiation is increased and, if a person sleeps in the typically cancerogenous AMF, gets that disease easily. Statistically, it has been found that in an increased radioactive radiation (Nagasaki, Hiroshima) there are more cancer appearances, what is true, and this is why. In these places gamma radioactive radiation is increased and there are lots of AMF. Cancer appears only when paraoncogen, by mutation, becomes oncogen. This happens due to higher gamma radioactive radiation concentration (concentration of gamma quantum elementary micro particles) and gamma quanta, by impacts into hydrogen DNA connections (a weak chemical connection - easily disconnects) get disconnected. Since there is AMF rotating a part of structural formula because of the known magnetic rotation of substances chemical formula and so, oncogen may appear, which becomes cancer and starts endless division. It is clear how has science come to a delusion, so that radioactive radiation has been accused to be cancer appearance cause. AMF is cancer cause and nothing else.

This example is similar to a wrong explanation about melanoma on skin after sun bathing, what will be, in details, explained further in this text. A well-meaning

note about official medical science mistakes is pointed. By this statement an important fact for people's health is pointed, because sun radiation ultraviolet (UV) is wrongly considered as cause of skin melanoma as well as some tumors, what is wrong. How have these mistakes occurred, explanation is following. By sunbathing skin gets higher temperature and after sleeping in a bed with AMF, skin temperature decreases up to natural level, and AMF becomes stronger and on skin appears strong body thermoremanent magnetization (TTRN) which is stronger than the mentioned BVM what enables skin melanoma appearance. Conclusion is to eliminate AMF from bed and melanoma will never appear. It is not necessary to talk about great benefit from sunbathing that creates D vitamin, which is already known for its usefulness. Today we are aware that there are more and more bone joints diseases and breaking, especially with older people, and the cause is not enough of sunbathing, that is necessary to do it often but only, it is repeated, to sleep and spend time in natural EMF.

How does Aging Occur and Why

To understand why older people get all diseases more easily than young ones, proofs that MP rule among molecules in cells should be understood. A work is published clearly pointing to existence of magnetic forces among molecules in cells, also explains a mother cell division and breathing [2, 6, 8]. In official literature about cell's division it is stated that chromosome chromatids suddenly start moving in opposite directions, and it is within cells division construction. Biology states that it is not known why chromatids suddenly move in opposite directions and which energy enables it [2, 6, 7]. The force making chromatids to go away from each other is only EMF. EMF magnetizes chromatids by the same kind of magnetisation because telomeres on each chromatid end is of the same chemical compound, i.e. the same nucleotides (TTAGGG), noting that with each cell division, because MP ages, nucleotides peel off (decrease mass in nucleus). It is known that cell's magnetisation center is in nucleus, and a bit less magnetization is in other organelles, too. Since MP are additive, each cell has magnetization, mostly, depending upon nucleus size, and, a bit less, upon other organelles, too. It is known that nucleus is the largest in CNS neurons, because cytoplasm is thin or there is none. These neurons' dimensions enable coded magnetization, representing memory, and some memory association of the memorized induces in neurons resonance, what is the memorized reproduction. All this is thoroughly presented in Literature 1 and 3.

With great number of divisions cells MP get smaller, being manifested as reduced metabolism that is performed under the influence of magnetic forces, which with aging get weaker [6, 8]. With aging, organism's immune system cells MP decreases, so,

organism's defence against intruder weakens [5]. Every cell has maximal divisions number and, finally, it dies, what is organism aging, ending with death.

Blood vessels are, also, affected by aging, for instance, arteries with aging become stiffer, less elastic and their volume reduces, bringing less food and oxygen to cells, what, also, is aging manifestation. During general organism's aging, arteries change making blood vessels rigid and less elastic [2, 4], mostly, because lipids (a kind of fat components) accumulate, especially, cholesterol (LDL) in internal membrane of artery (intima). In later phase occurs calcium salts deposition, as well as connecting tissue flourishing, all contributing that artery becomes non-elastic, so it can be stated that arteriosclerosis is a normal phenomenon concerning aging, and it starts, usually, after 40 developing slowly in accordance with entire organism aging, and is not considered to be a disease [12]. With natural arteriosclerosis, blood vessels clogging increases, reducing their volume and supply with oxygen and nutrition in all cells. It is all aging manifestation. In essence, these are miniature magnetic domains that are taken into the body with food and have paramagnetic properties induced in EMF and stick mostly to the internal spaces of arterial blood vessels, which cannot be avoided but only slowed down by diet and physical activity [12]. This work author notes "indeed it can be prevented, only, with appropriate experiments should succeed". As this statement proves, there is a clear twin brothers example, one of which is cosmonaut. This will be thoroughly presented.

Causes and Mechanisms of Aging are Diseases Shortening Life, as Official Science Suggests

As many world scientists state the basic aging cause is organism's deformation being in the magnetic material compound of cells where DNA (deoxyribonucleic acid). It brings deformation development in diseases connected with aging: cancer, immunity disorder and autoimmune diseases, all cardiovascular pathologies, brain function disturbances, i.e. nervous system (mental disturbances), decrease of thinking abilities (Alzheimer disease), diabetes melitus, arthritis (joints inflammation). All the mentioned diseases are AMF from external environment results. Noting that in old age, cells nuclei's MP are rather worn out, i.e. reduced, therefore, AMF with lower intensities can cause mentioned diseases. The most recent medical conclusion that the mentioned diseases are increasing, especially, CVD with younger people, what was not the case in the past, but causes are AMF in living environment, what this work makes clear.

Aging process, mostly, affects cardio-vascular and nervous system. By cholesterol, calcium and other paramagnetics accumulation in blood vessels, representing aging process, causing supply of various organs cells with blood, tissues with nutrition materials

decrease and, also, excretion of worn out metabolites from cells. Nervous system is the most sensitive to this waste material accumulation, which requests continual supply with oxygen, glucose, calcium and other matters.

Today, it certainly can be stated that the main reason of aging is magnetic intermolecular forces decrease in cells. Our entire inheritance is written by magnetic code in DNA molecule which has double spiral form and is located in chromosomes in cell's nucleus, what means that all biochemical reactions in organism are written according to magnetic code in DNA, (representing magnetic complex - sequences construction connected with magnetic code building nucleotides and genes).

To make this clear, it is necessary to study Literature [5]: "Cause of Autoimmune Disease Anomalous Magnetic Fields", Journal of Pharmacy and Pharmacology, New York, USA, 2016. When this work is thoroughly studied and understood it will be clear how does immune system function and how do autoimmune diseases appear. It will, also, be clear how to eliminate corona virus, which is dangerous for life of people in AMF from environment. AMF is dangerous for health because viruses MP and AMF are additive, so immune system cells die too much and virus is difficult to eject from organism, while to eliminate AMF is easy.

To repeat: virus has its magnetic properties (MP) being created in EMF, and by entering a host cell that, also, has its own MP in balance with other cells MP, and with the virus according to MP law (additivity), virus and cell with two MP go out of balance and leukocytes attack to destroy them (immune system law) – Is [5]. Virus uses the host and penetrates the cell wall, only, with magnetic forces (viruses and cells). Virus's nuclear acid binds to receptors in the cell and takes over the necessary substances for metabolism by magnetic forces, then it becomes alive and replicates and increases the number and MP but Is certainly has the ability to destroy this group of replicated viruses with its leukocytes and macrophages larger number, this is a usual way of fight between viruses and organism. However, when there is AMF from external environment present, so additive MP are very high and Is with hard fight can destroy the intruders (because lots of leukocytes die).

This is a brief information about Is and intruder fight. Based on the above, it is clear that, if attention is paid to AMF and it is eliminated, person usually recovers. It must be noted that in the case of cancer and CVD, which for their pathology first form BVM in an organ or part of an organ, it is much harder for Is to defeat the attacker (to study the literature on cancer and atherosclerosis) [7, 9]. Disease must be, by additional therapy, eliminated away from organism.

Virus Caused Tissue Death without Contact

The following experiment with hermetically separated tissue by cells infected with a deadly virus is also very clear evidence. Results are impressive. Two identical tissues are kept in two vessels, hermetically separated. A deadly virus is injected into one tissue, killing the tissue cells after a long time. In the tissue, the deadly virus multiplies enormously in EMF, and builds coded magnetization of tissue cells. It is clear that a very strongly coded magnetization occurs in the tissue, which is with the typical code of that deadly virus. Then, the induced magnetic code of the deadly virus and cells tissue in healthy, hermetically separated, tissue encoded by induction magnetizes healthy tissue, which created a new deadly virus according to the magnetic code of the deadly virus, killing the healthy tissue. The experiment indicates that it is possible to act on the human CNS, where cells are neurons with naturally stronger M properties than other cells in the body, in both positive and negative forms that change behavior, what represents for the human organization a great scientific discovery, when properly used can direct behavior and work of each individual. This, already, exists in people as inborn instinct and religious indoctrination.

Creation of Life on Earth Hypothesis

This is a clear proof that in the similar way first RNA appeared and, through evolution, life on Earth has been created. "Official explanation on how the life appeared on Earth is not known..." Further text gives an additional life's origin explanation, only on Earth, because on this galaxy's other planets there are physical and chemical conditions for no life development. Additional explanation: By association of chemical elements with specific MP enabled by temperature. Temperature constantly changes and construction nucleotides MP in RNA change, great moving around occurs, what is metabolism, with main participants - K Na Ca etc. Chemical elements, by magnetic and electromagnetic connections (for instance, by covalent connections) build sequences which, according to the same principle, unite into nucleotides, then nucleotides, electromagnetically, connect into one-chained RNA which builds own unique magnetic properties and, at the border, two magnetic fields, i.e. RNA and EMF magnetic fields concentrate small densities substances, which are chemically connected lipids, and build a membrane of one-chained RNA. Then, two-chained RNA easily appears in such a way that they connect, due to minimal (0) magnetization, which is around the RNA's middle scale, so centromere with two chromatids appear, where, with chemical connections, are binded nucleotides, constructing two DNA chans. Everything further evolution develops. Decisive role in further development of life's variety has Crossing over which functions through substances exchange due to EMF on DNA and RNA. In this way

life on Earth has appeared, through first RNA up to today's numerous species.

Fundamental Role of EMF in CNS Functioning

Historically observed civilisations development on Earth as a planet, clearly noticed are locations with mostly developed civilisation reaches, appeared due to optimal EMF intensity for such kind of CNS development [1, 3]. History has recorded that the oldest civilisation was by rivers Tigris and Euphrates (Mesopotamian civilisation), then younger Persian Empire, then Egyptian civilisation, then Greek culture dominates, after that Roman civilisation and, today, Western-European, American and Russian sciences are on the highest levels. All the presented clearly points that memorising occurs by coded magnetization of CNS neurons in EMF. EMF had, only, 2000 years ago, two times stronger intensity than today. The mentioned Earth geographical regions had optimal intensities for CNS development and that is why the mentioned civilisations reached the highest levels.

Mental diseases appearance is product of electromagnetic fields from environment [3]. It is presented how does paranoia appear as a disturbance. It will be presented how, in CNS neurons, wrongly memorized informations appear by coded magnetization, called paranoias. Through repeated informations, which are memorized by coded magnetization, with voltage up to 100 milivolts, and are ejected automatically, during exposure. The recently received information is accepted with 1-3 mili-volts [13]. It is necessary that this brief explanation of paranoia helps you to see scientific truths that mean life.

It is known that cosmonauts in cosmic stations have big problem with memory because EMF intensity in cosmos is very much decreased. Cosmonauts help themselves by writing down the past events and working tasks they do not to forget them. It is clear that lower EMF intensities lowers memory abilities, proven by experiments. Next facts confirm all the rest presented: A Nobel prize winner case is known in the world who discovered DNA structure. He gets in America a task to establish Institute for Genetics and, while selecting the staff to work in the Institute, by testing it is found that some people, born in genetically lower EMF, were intellectually weaker than people born in higher EMF intensities. He exposes this truth, but many people misunderstands it, accusing him of being a racist. It is pointed that the Nobel prize winner did not know this reason.

During 30 years of EMF and AMF measurements in humans living spaces, it is noticed very clearly that natural EMF intensities, amounting to cca 44000 nT are optimal for pupils, students and scientific workers, too. In many year practice there are many proofs for this statement. Unfortunately, there are

many magnetic and electromagnetic bad effects on interpersonal relations, such as marriage relationships. While measuring magnetic and variable magnetic fields (electromagnetic), a great number of conflicts between married couples were located in high intensities of one or another field.

Monozygotic Twin Astronauts, Experiment in Cosmos and on Earth

Monozygotic twins have the most similar genetic material because they are created by insemination of mother's one ovum with two spermatozoa genetically formed in the same EMF intensity. This gives them great similarity phenotypically and genotypically. It is clear that EMF intensities are the same with sperms because they are the most similar sequences and nucleotides, too. A mother's ovum is inseminated with these two spermatozoa. The zygote created, firstly, furrows without differentiation in EMF, to equalize magnetic properties of uterus and spermatozoa because extraneous tissue is in uterus, then, it will develop, by differentiation, into two fetuses, also, in the same EMF, what gives very similar organisms after birth.

An experiment with twin monozygotic cosmonauts is performed. This experiment has puzzled scientists in USA, but here is what it is about. Monozygotic twins have almost identical genetic material. One of the brothers spent a year in cosmos. Their telomeres dimensions were measured, which were identical (before one of them went to cosmos). One of them becomes astronaut and spends a year in cosmos, the other one lives normally on Earth. After returning from cosmos, changes of telomeres' dimensions are found in their length, being different between brothers. Also, found are different methylations in body cells. The cosmonaut got 5 cm taller than his brother who lived on Earth. Scientists, amazed, wonder why is it so and try to clear it up. This event's cause is totally logical and clear. Explanation is following: EMF in cosmos has lower intensity and with different variations than EMF on Earth's surface. Since EMF is a mother cell division into two baby cells promotor [2,7], it is clear that body cells division of the brother on Earth was quicker and more frequent than of the cosmonaut's body cells, whose division was slow (concerning time) and the division itself was very long. It is known that telomeres get shorter by each division, so that cosmonaut's telomeres divided less times than his brother's on Earth, whose division was more frequent and faster. A logic conclusion is that cosmonaut's telomeres stay longer than the brother's on Earth. Therefore, the cosmonaut will be younger compared to his brother on Earth. Aging is fully explained in this work. It is noted that through cells division on Earth, entire organism ages faster, and in cosmos, where EMF has lower intensity, cells division is reduced and slow, that is why cells stay with longer telomeres and less atherosclerosis, meaning

that organism ages more slowly and, therefore, cosmonaut looks younger.

EMF has lower intensity and variations (?) in cosmos, so magnetic properties among cosmonaut's tissue cells and organs are smaller, so there comes expansion, i.e. distancing between organs and tissue of cells molecules. Bones densities are reduced. It is known that all materials density depends on EMF intensity. Stronger EMF gives higher tissue in organs density and vice versa. That is why a man in cosmos becomes taller compared to his twin brother on Earth. As for methylation in cells, it is clear, too. CH₃, as a methyl group, is distinctly paramagnetic and in cosmos the cosmonaut's cells methylation is much rarer and less represented compared to his twin brother on Earth. This suggestion explains the differences between brothers after the cosmonaut's return from cosmos.

Literature shows that after some time spent on Earth after returning from cosmos, telomeres lengths got equal, what puzzled scientists as unexpected. The truth is that with the "rejuvenated" cosmonaut brother, now comes faster cells division in the Earth magnetic field and telomeres lengths, after some time, get equal. Because, rejuvenated, i.e. longer telomeres get magnetized faster and divide more frequently (peel off faster) in EMF on Earth's surface, so they get equal with his brother's, who was not in cosmos, magnetic properties.

Brief Information about MP in Physiology

At the end of this work there is Literature list to be studied and understood in order to supplement and correct the knowledge from classical biology and medicine at schools and universities. When works from the Literature list are understood, it will be clear how has life on Earth appeared and how will it end, too. Some conclusions from published works are quoted which must be in biology and medicine textbooks: 1. EMF enables mother cell division into two baby cells. 2. Breathing is enabled only by breather's magnetic properties (MP) (O₂, erythrocyte, CO₂ MP of nucleus), and not diffusion and partial gases pressure, as biology-medical science states [2]. 3. Immune system functions due to leukocytes and intruders (viruses, bacteria, fungi, extraneous particle and dead cells) MP [5].

Also presented are how do inborn instincts occur in humans (love for childbirth, hunger, thirst, sex etc) [3]. In CNS are centers for all functions. These centers neurons are codedly magnetized by EMF during creation (formation), already in uterus. Particular sensors of senses (sensory stimulations), after birth, produce micro-current impulses which in neurons of particular centers create, by resonant magnetic fields, recurrent micro-currents which are CNS response to internal and external stimulations (what is completely the same with memorized informations which,

automatically, return to our senses). These micro-currents stimulate motoric functions of some glands to excrete substances for satisfying the inborn needs of organism and muscles to react to stimulations from centers for inborn instincts. It is important to know: Even before children are born love for certain job can be developed in them to do when they grow up, namely, persons can be formed with an inborn talent for various activities, but with a great work for doing such predicted activities, only in this way talents can be manifested.

Brief Information on Pathology

Given is explanation about autoimmune diseases (AID) appearance enabled by artificially enlarged EMF, called anomalous magnetic fields (AMF) [5, 7-9]. Then, explained is appearance of the hardest diseases, CVD, cancer and diabetes [7-9]. Every tumor appearance is caused, only, by AMF from external environment and variable magnetic field, also, from environment. CVD and diabetes appearance is due to, only, AMF.

Cells Division is Limited by Aging, i.e. by MP

All cells in organism divide under the influence of EMF. DNA chain is, also, exposed to division. A classic experiment with cells division is conducted on fibroblasts, relatively simple connective tissue cells. Fibroblasts are cartilage basis. Experimentally it is found that fibroblasts, separated in a culture out of organism and placed in optimal conditions, cannot divide more than 50 times. It is concluded that there is a magnetic limit for division, i.e. magnetizations and demagnetization number is limited by paramagnetic sequences age. During division process, molecules at the ends of chromosomes tear off, so that, at each end of chain, one molecule gets separated. It peels off because it has lost its MP power, what is necessary in double chained DNA [14]. It is clear that nucleus of dividing cells MP get smaller and smaller during division, meaning nucleus, i.e. cell's MP gets smaller. Particularly smaller MP of cells is (leukocytes), so intruders with stronger MP easily create pathological conditions. With such long shortening and MP lowering inside cells MP, occurs cell's death. It is clear that cells division is limited and that, slowly, the whole organism approaches death. Literature states that spending magnetic code in DNA is the main reason of organism's aging and death. Even if there are no diseases for years, a human being would die because of spending gentic (magnetic) potential reserves, i.e. aging is MP weakening among molecules in a cell. Depending upon inherited magnetic factors, and with poorly pronounced AMF, which are the main cause of diseases, humans can live 94 – 110 years. Known record about human life length is 111 years. There are various texts about some people living 130-150 years, what is not truth established by reliable scientific checks.

Experiment Aiming to Prolong Humans Life

Theoretically is clear how life can be prolonged, what is in the whole world researched and experimented. There are problems with telomeres peeling off prevention, allegedly, cancer appears, what is logical. It is known that cancer appears in AMF [6, 7], and scientists experimenting with telomeres do not know it, and it is clear that cancer will appear because experiments are done in AMF. Essence is that MP with years get weaker and all functions get weaker, as immune system functioning by the use of leukocytes and intruders MP [5]. Conclusion is clear: in old age organism is defensively weak and that is why diseases may easily defeat it helped by AMF from external environment.

Experiments for aging slowing aging are performed, but not so thoroughly because of financial means lack. This work author, with certainty, states that human life will be prolonged, because there, already, are clear proofs for it in a near future, what is minutely presented further in the text. It can be said that life interval of 94-110 years is a maximum time limit [13] bestowed to us by nature under the condition that we take care about our health and to avoid hard diseases, mentioned in the above text, produced by AMF. After thirty years of researching the mentioned diseases causes, it is concluded that the only causes are AMF and variable AMF. Conclusion is clear: if attention is paid to spend life in natural Earth magnetic field (EMF), over 90 years of life can be guaranteed, what, after 30 years of work this author has proven that there are persons he placed to live and work in natural EMF, 15 of them, all are still alive and have more than 94 years of age, and it will be still observed.

Atherosclerosis

"Almost one half of people in USA and Europe die because of atherosclerosis." "Cardio-vascular diseases are leading cause of premature mortality in Serbia" [4, 9].

It should be noted that arterial pressure depends upon magnetic field from environment, because high AMF intensity in living environment heightens blood thickness, so, automatically, arterial pressure gets higher, and this burdens heart functioning, especially with old people.

Atherosclerosis mechanism is not completely known. However, there are many theories. Atherosclerosis is process in internal part of arterial cells, occurring when fats, cholesterol, calcium and particles of cells elements accumulate (all paramagnetics) in arterial intimacy, forming solid structures called plaques.

Mechanisms of appearance, development and general process meaning of atherosclerosis still occupy scientists, because about this monster is still not known everything.

All the above is cited from literature and points to a necessity to present more clearly atherosclerosis cause, which has not been cleared, so far. Lots of healthy and diseased coronary circulation mechanisms are not explained, right these ambiguities, by knowing other scientific disciplines, will be cleared up.

Literature states atherosclerosis cause: "High concentration of cholesterol in plasma in the form of low density lipoproteins (LDL) is the most important factor in atherosclerosis appearance" [12]. Lipoproteins LDL and high density HDL are paramagnetics, and official literature characterises LDL as the main cause. An explanation is given how it has come to this conclusion that LDL is the main factor in atherosclerosis appearance. "Atherosclerosis is large and medium arteries disease" [12].

It should be remembered how does blood go through the mentioned arteries, i.e. blood conductivity through a blood vessel is blood flow through blood vessel for a given pressure difference. "Very small diameter of a vessel changes conductivity amazingly! Small diameter of blood vessel changes cause large changes in blood conductivity ability during laminar flow... Vessel's conductivity increases with the fourth degree of diameter" [12]. With vessel's diameter increase flow increases with diameter on the fourth degree (r on 4) and cells MP, constructing layered blood vessel, have collective micro-magnetization which decreases with radius on the fourth degree. More clearly said, with the fourth degree of distancing from blood vessel walls, MP effect upon blood weakens very quickly. When this is understood, it is easy to clear the "amazing conductivity", as well as laminar blood flow through blood vessel. MP in micro-world are quantum values (elementary magnetic particles are quanta) and that is why blood flow is laminar because elementary magnetic particles number with distancing from source (arterial blood vessels cells) decreases, i.e. decreases with r on 4. Since the fastest blood flow is in blood vessel's central part, inertia law does not allow cholesterol of higher density to stay closer to blood vessel's wall, while light cholesterol with magnetic (M) forces can slow down, even to accumulate in the space of strongest M forces, what produces M field's vectors stacking, usually, focused in blood vessel intimacy. LDL and calcium (distinct paramagnetic) accumulation points that magnetic forces are the only cause of atherosclerosis plaque. This is a natural process of arteries clogging, i.e. of atherosclerosis appearance and AMF from external environment presence the main pathological field.

"Much less is known about lipoproteins with high density (HDL) function than about low density lipoproteins (LDL) function" [12]. It is believed that high density lipoproteins (for they have stronger paramagnetic properties) can, in fact, absorb cholesterol crystals (paramagnetics) "starting to deposit in arteries walls" [12]. Explanation is following: Since HDL is of higher density, i.e. larger mass, so it has stronger MP, and moves, according to inertia law, along the middle of laminar blood flow, with its M attracting forces absorbs cholesterol crystals brought by blood current takes from the place of possible atherosclerosis creation and in such way, helps protection against arteries diseases. The present AMF speeds all this up and atherosclerosis pathology type appears, what can endanger life.

Should be repeated: AMF from external environment is cancer and CVD cause, what is the greatest cause of getting diseased and mortality both in the world and in Serbia [2, 7, 4, 8]. It is interesting to point out that in Serbia with CVD within a month die cca 4300 persons (144 a day). It is known that with corona virus within two and a half month died 130 persons. Compared within two months of CVD 8600 and during same time 130 of corona. It is not incorrect to repeat that 8600 is an alarming number, but nobody reacts, it is only repeated that risk factors are responsible. For more than 30 years I have been writing scientific works, but about this paradox everybody keeps silent. To remove AMF from dwelling places is easy and it would drastically decrease getting disease and mortality with CVD and malignant diseases, as well as with corona virus. That is why help is requested from the competent ones to eliminate AMF from living spaces.

Immune System and Autoimmune Diseases

Everything in EMF has MP. So, all cells macromolecules have their magnetization. Living organisms appear in EMF and all cells in organs and out of organs form with balanced intermolecular, i.e. intercellular, magnetic forces, meaning that they function according to homeostatic M mechanism aiming to maintain a healthy life originated in natural EMF.

Work of immune system is explained and appearance of autoimmune diseases due to natural EMF [5]. Immune system function is a defending system of organism, with its own immunity and immune response, protects organism against extraneous microorganisms (viruses, bacteria, fungi and parasites) and their chemical substances (toxins) and against its own dead cells. Generally, immunity is immune system reaction to extraneous substances both to microorganisms and macromolecules (proteins and polysaccharides). Is are cells and molecules engaged in immune response representing a collective coordinated immune response to extraneous agents.

There are two Is components - nonspecific or inborn, which is the first line of organism's defense and reacts in the same way to every harmful agent, there is specific or acquired immunity, developing in contact with harmful agent. These two components supplementing each other with their MP, and they are Is foundation in defense against intruder. On the basis of immune reaction nature it can be divided into humoral, made of antibodies excreted by B lymphocytes and effector circulating proteins, and cellular made of T lymphocytes, phagocytes and NK cells (killer cells). All these cells originate from stem cells in bone marrow, with higher density, so Is cells appear with increased MP. Basic function of defensive cells is to destroy intruders with magnetic forces so that T lymphocytes could have balanced MP with other body cells go through thymus where macrophages, with own magnetic forces, destroy T lymphocytes which have amplified MP, compared to all cells antibodies in body, they are 90%, and only 10% satisfies general homeostasis principle (magnetically balanced cells) in organism, what is intermolecular and intercellular magnetic balance. B lymphocytes have antibodies on membrane with balanced MP in each tissue, ready, if antigens (extraneous agents with higher MP) appear, then antibodies unlink from B lymphocytes and, with magnetic forces, destroy antigens, like T lymphocytes do.

Entire metabolism in organism functions due to cells, tissues and organs MP [6, 8]. Also, intruders (viruses, bacteria, fungi, toxins, extraneous tissues and own worn out - dead cells) have magnetization because they have originated in EMF. By intruders' with MP entering into organism they sum up with cells (of host) MP tissue, in that way MP stronger than naturally balanced cells appear. Leukocytes are attracted by cells with strengthened MP and they act, with their M forces, upon every intruder aiming to, in various ways, prevent their harmful effect, what is Is work [5]. Worn out - dead cells have lost heating energy production, they cool off and get higher MP, Is cells act upon them as they are intruder. When it happens that additional AMF, whose genesis is exogenesis, increase some cells of organism MP, so that MP get out from magnetic balance compared with the other organism cells, then leukocytes, with their M forces, attack their own cells with increased MP, so AiD (autoimmune disease) appears. Briefly said: the very organism attacks its own cells having antigens with stronger MP than the balanced ones. This would be a brief information about Is work and AiD appearance [5]. Extraneous agents are protein molecules called antigens. These extraneous cells can be bacteria or viruses trying to destroy body integrity with their antigens. Is cells (T leukocytes and B leukocytes) attracted by M forces of these extraneous cells or antigens, destroy them. Each of these extraneous agents have separate identity set by amino

acids, which construct its proteins, order. Since amino acids are available for proteins creation, there are numberless variations of antigens.

Addition to explanation of immune system: Leukocytes, originated, as all blood, in bone marrow, function in body because they are in magnetic balance with all organism cells (magnetic homeostatic mechanism). Since every intruder (virus, bacterium, fungus or extraneous particle) has its MP, by entering the body, i.e. the host cell, for example the Corona virus in a lung cell, it binds with its receptors to a cell in the lung that has MO in metabolism and magnetic connections with the cell receptor, which all cells have, (as corona virus is with RNA). Virus is magnetically conducted into a cell that has enzymes to allow nucleic acid to replicate in RNA cytoplasm. RNA virus begins to replicate with magnetic forces, and with its magnetic code it takes over substances to build a new nucleic acid from the host cells. Then virus multiplies numerically because it begins to live with stronger MP. It is said that it disturbs the hemoglobin function, which with divalent Fe-magnetite is surrounded by a nitrogen (N) ring, very quickly because AMF is present from environment, so the host cell and the amplified virus have stronger MP. Organism starts to fight by temperature to destroy the intruder, but everything is weak for the host MP, multiplied virus and AMF from the external environment and that usually ends badly.

Diabetes - Bad Metabolism of Glycose and Insulin

Diabetes melitus is glycose and insulin bad metabolism in cells because they are produced but not used, so in blood content of glycose and insulin is increased and, therefore, blood MP increase, and in AMF easily occur all kinds of diabetes melitus, and with it health complications what in the work [11] are minutely explained.

Diabetes is the most frequent endocrinological disturbance with over 190 million diseased, while World Health Organisation estimates that, within twenty years, the number would increase to 330 million. Scientists blame various risk factors, like overweight, which considerably increases the risk of diabetes type 2 appearance, because triglycerides are on cell's surface (membrane) in larger number with fat people, release energy (heighten temperature) on cell membrane where receptors for insulin, with magnetic forces bond glycose, so receptor's MP weaken (temperature reduces MP) and insulin resistance appear, i.e., diabetes type 2 appears, what is a pretty much increase, cca 90%, with a grown up person.

Official medical science connects many complications with diabetes patients, for instance, it states that blood vessels narrow down, or get blocked, than it can cause myocardial infarction, stroke etc. All these official science statements are incorrectly

interpreted because the mentioned diseases cause is only AMF from environment [11]. To understand everything completely Lit. [11] should be studied.

Why and how does diabetes type 1 appear as autoimmune disease, what has already been explained. Diabetes type 2, appears by insuline resistance, has been cleared up, too, and it also goes from fatness diabetes. As for effects of diabetes, it is minutely explained and proven by facts, that causes are only AMF and not increased glyucose in blood, which only increases blood MP, so that even smaller intensity AMF may becomes pathological.

This is a brief review of main scientific works enabling readers to understand everything, and, also, opens new views on how does life function, why diseases occur, how to treat and prevent them.

Statistics States that Younger People Get Diseases Recently, what was not Like that before

It should be said how do MP look with young people. After birth humans grow up quickly, meaning that cells multiply quickly enabled by MP in cells which are strong and metabolism function enables growing, immune system functions perfectly, all being enabled by MP of young ones. It is already known that with old age MP get weaker. When all this is known, it is easy to understand why older people are less resistant to various diseases than younger ones. Official literature states that, recently however, young people get more easily diseased than before.

The cause is because they are in AMF, and be sure, nothing else is the cause. It is obvious how much phones, fixed and mobile, earphones, computers, television sets, printers, and home furniture is more that 90% with ferromagnetic and paramagnetic materials. Complete electrification of living space is great AMF and electromagnetic field generator, but nobody pays attention to it, so it is a real wonder that there are no more diseases. There are no more diseases because people move around a lot, so the appeared body viscous magnetization (BVM) located by AMF in an organ or its part, with body moving around decreases quickly, i.e., disappears. Moving is great help in BVM decomposition in body, preceding an illness. Official risk factor is not moving, stated in science, too. But the attention is not paid that if one moves and lives and works in AMF, oftenly occurs heart infarct, oftenly ending with mortality, what happens to sportsmen sometimes. It is necessary to eliminate AMF from dwelling rooms and moving around, as other physical activities is good for everyone, prolongs life and slows down aging. It is necessary to add to this brief exposings with pathology appeared in AMF from external environment. All diseases (CVD, tumors, diabetes, mental disturbances asthma, nephritis) cause are AMF from external environment, what is

thoroughly explained and documented in submitted works. It must be noted that official medical science connects the mentioned diseases with risk factors, what is incorrect because they are only effects of AMF present in living environment, as the given example about not enough moving as a risk factor. In brief, diseases cause are BVM in organism formed by AMF from environment, only then malignant disease or CVD appears. It is repeated, moving destroys BVM and that is why there is no disease regarding great number of AMF in people's living spaces.

Smoking and Health

By such opinion medical science is praised because a very large number of diseases are attributed to the risk factor of smoking, it only lacks an explanation as to why this is so, the explanation is following: nicotine, as a substance of tobacco smoke, has in the structural formula CH₃ (methyl group) which is paramagnetic and enters into blood by smoking, so the blood gets increased MP (something similar to glyucose). Media inform that smokers were more attacked by the corona virus than non-smokers. It is clear, because the blood of smokers has stronger MP and the virus acts quickly in AMF, this is understandable and it is necessary to quit smoking and AMF from the living space and there is no disease. This paper explains that the main pathological cause are large number of AMF and anything that increases the blood MP automatically increases the risk factor for various diseases appearance. This explanation satisfies the categorical attitude of medical science that smoking is very harmful for almost all diseases.

Oxygen Transportation to all Body Cells

An explanation must be added of how hemoglobin transmits O₂ to cells throughout the body, because the official science has not fully explained for not understanding MP. It is known that Fe is surrounded by N (nitrogen diamagnetic) ring, which does not allow with its diamagnetic properties that O₂ (two oxygen atoms, distinct paramagnetic) with magnetic force attach to Fe, because by entering cells through blood, no M forces could separate O₂ from divalent iron, and from nitrogen ring cells magnetic forces easily overtake O₂ and in chemical reactions liberates energy in a cell forming CO₂ which is diamagnetic. M forces inside cell eject CO₂ out of cell into venous blood. Through venous bloodstream into right heart, then through right artery into capillary and then into alveolus into which, by inspirium, enters O₂ which capillaries, by M forces, bond with hemoglobine in erythrocyte and O₂ through blood goes to left heart, which through arterial flow carries O₂ to all cells in organism. CO₂ from alveoles, by expirium, goes to atmospheric air. This should be explained by exact M forces, because official science seems not to approve the ruling MP in bioscience.

Experiments in Psychiatric Clinyc

In order to show AMF influence on people, an experiment is performed with schizophrenic patients in a Psychiatric Hospital. One room with 10 beds was arranged so that everywhere is a natural EMF (ecological room) without AMF. Each month, ten patients slept and spent time in natural EMF. Before entering the ecological room, complete laboratory blood tests were performed, and after a month of staying in the ecological room, laboratory blood tests were performed again. In total 40 patients went through the ecological room within 4 months, by simple summing of all individual analyzes from ecological room and from the room with AMF separately, after comparison results were following: Calcium in the blood was four times higher in AMF, i.e., in the ecological room, calcium was four times lower in the blood, which indicates that there is no atherosclerosis in the ecological room and organism aging slows down. Isoenzyme (S-CK creatinine kinase) of the heart muscle is 4,5 times higher in AMF, being a diagnostic indicator of heart attack, it is clear why there is the most atherosclerosis in AMF, also the same isoenzyme is moderately increased in acute psychotic attacks in AMF, where mentally ill people are treated, the outcome is bad. Isoenzyme (S-LDH) serum lactate dehydrogenase is increased 3,7-fold in AMF and is an indicator of testicular stem cell cancer indicating that cancer cause is AMF. Bilirubin in AMF is 3.4 times higher in the blood, being erythrocytes destruction when anemia occurs, indicating that AMF is the cause of anemia. Potassium in the blood is 3.7 times higher in AMF, causing arrhythmias, usually the indicator of a pre-infarction condition. Other laboratory results are similar. The conclusion is that all patients with all diseases should be treated exclusively in natural EMF, and then the mortality of patients will be drastically reduced.

It should be noted that the experts who followed the experiment results did not notice anything during the data processing and as you can see the results are very good and instructive. The above conclusion is also valid for the action of virus corona in the body where AMF are present.

These experiment laboratory results from the hospital with mentally ill people will be compared with the laboratory results of patients with corona virus who are being treated in AMF. Some analyzes results of patients with the virus, based on media informations, are very similar, such as anemia in all, leukocytes are reduced, cardiac arrhythmia is similar, the media reported that the temperature kills the corona virus, which makes sense because the viruse's center has high MP, and high temperature is a possible help in fighting the virus. The remark is: it was not possible to get the results of laboratory blood analyzes of the patients with

corona virus, because the officials said that they did not have those results, or did not want to give them. Immune system cells are known to have much smaller number of leukocytes in elderly patients and are weakened by MP, reducing the surviving ability with diseased by corona virus. With younger patients, the number of leukocytes is higher and MP are stronger, as already mentioned, so the body's defense is better because the M forces of leukocytes can prevent the progression of the disease and that is why younger people, as they say, get less diseased. Recently, however, corona virus disease has been increasingly attacking young people, as media inform, and this is a clear cause that has been shown when explaining why more and more young people are suffering from CVD, what was shown and explained earlier. The same explanation applies to corona virus. It should be emphasized that people, out of ignorance, make a lot of mistakes in relation to AMF from the external environment, which should not be forgotten because they accelerate all pathological events with a diseased one. Unfortunately people don't know that it should be removed. This work requests the authorities to remove artificial AMF and will be more successful in treating the current disease. We have heard from the media that most often the corona virus attacks erythrocytes in the lungs, i.e., hemoglobin and O₂ transfer to a cell is reduced, and natural respiration cannot provide O₂ to cells, so O₂ is artificially delivered to cells, but the most important thing is to remove the present AMF because they are always an obstacle to organism functioning. For everything presented, the author is willing to personally help in the work of anyone who wants to hear, because this is a new approach to human health for biology and medicine.

It must be emphasized again that only CVD, malignant diseases and diabetes end many lives in the world and in Serbia. It has already been said that in Serbia about 4300 people die from CVD in a month, and it is all the fault of AMF, and not the risk factors that are only the consequence of the present AMF from the environment.

The author wants to inform you that he is invited from all over the world to send his scientific papers to publish them in the scientific journals without financial participation. He was invited to give lectures, to be the scientific papers reviewer, and to preside conferences, what the author refused because he did not speak English, but waned all these scientific discoveries to be available to the whole world and the country of Serbia. But for 30 years the authorities are silent because of their misunderstandings of MP and insufficiently studied pathological factors.

This work is provoked by the appearance of the Corona virus in the world and in our country, but also by the Journal of Pharmacy and Pharmacology

editorial board request from New York, NY 10989, USA, because ignorance of biological-medical science is seen. That is why the author asks you not to act according to the law of inertia, imposed to you by somewhat a bit indoctrinated education. In your brains, everything is memorized with 100 microvolts [13] and new information is remembered with 1 to 3 microvolts [13], so turn logic on. You are able to show all the people of the world that AMF should be eliminated from the living spaces, and then it is easy to cure any disease caused by AMF, so the corona virus, too.

CONCLUSION

Well-intentioned information. A brief suggestion for biology and medicine: you lack a lot of knowledge about the influence of Earth's magnetic fields on life origin on Earth and information about the end of life on our planet. I repeat, there is clear evidence that the end of life will be in about 1500 years, based on satellite observation of EMF intensity which is getting weaker and will very quickly reach 0, meaning, there is no division of a mother cell, what is proven by Russian scientists, that EMF 0 (zero) stops cells division. It is known that there is no magnetic field on Venus, so there is no life there, to seek life on this planet is a waste of time and money, and that fate certainly awaits our Earth. It is only possible to master the knowledge in order to artificially maintain a magnetic field that would prolong life.

It is, also, possible to influence aging in order to prolong life. If the event with a twin cosmonaut brother is understood, life conditions from cosmos could be simulated, what would mean rejuvenation.
